

Digital Photography DSLR Beginners

The course is a beginner's short course programme. The course is appropriate for those with no prior knowledge of digital cameras (compact or D-SLR), or those with experience of digital compacts upgrading to D-SLR cameras or for those making the transition from 35mm (up to intermediate skill) to digital.

No skill with any type of camera required, just a willingness to learn.

Learners will be taught to understand how the D-SLR (Digital Single Lens Reflex) camera works on a basic level. The learners will be introduced to using a D-SLR camera on manual settings using ISO, shutter speed and aperture. They will gain knowledge on photo composition and experiment with a range of techniques. How light affects photography and the use of the built-in flash. They will understand a range of ways to present their work for personal or artistic purposes and selfcritique.

There will be opportunities for learners to participate in taking photographs outside of the centre, weather permitting.

Duration:

10 weeks (2 hours per week) on a morning or evening sessions.

Equipment:

D-SLR Camera and Digital media.
